# Cris John Kate C. Labiaga

**Full Stack & AI Developer | Web Applications, RAG & Automation**

johncrislabiaga@gmail.com | +63 970 245 4456 | github.com/Kurisujon | webcris.dev | Davao del Sur

## PROFILE

Full Stack & AI Developer focused on building responsive web applications, RESTful APIs, database-driven systems, AI-powered features, and workflow automations. Experienced with React, Next.js, TypeScript, PHP/Laravel, Node.js, PostgreSQL, Supabase, RAG, embeddings, and LLM integration. Uses AI coding agents to accelerate implementation, debugging, testing, and refactoring while validating architecture, integrations, and code quality.

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Python, PHP, SQL, Dart
**Frontend:** React, Next.js, Tailwind CSS, HTML5, CSS3
**Backend & APIs:** Node.js, Laravel, FastAPI, REST APIs, API Integration, Postman
**Databases & Data:** PostgreSQL, MySQL/MariaDB, SQLite, Supabase, pgvector
**AI & Automation:** Google Gemini, RAG, LLM Integration, AI Agents, Embeddings, LangChain, Qdrant, n8n
**Tools & DevOps:** Git, GitHub, Docker, GitHub Actions, CI/CD

## PROFESSIONAL EXPERIENCE

**Backend Developer Intern** | Infosoft Tech Solutions, Davao City — Jan 2026 - Present

- Contribute to government LTS web platforms for Tagum, Panabo, and Davao de Oro, supporting frontend interfaces, backend workflows, and relational data handling.
- Build, test, and debug RESTful API integrations using Postman for request validation, endpoint testing, and reliable communication between application services.
- Support feature implementation, troubleshooting, and maintenance across frontend-backend workflows in a collaborative development environment.

## PROJECTS

**CHoDaMS - City Housing Data Management System** | Full Stack Developer — 2025 - 2026

- Developed CHoDaMS for the Local Government Unit of Digos City (LGU Digos City), supporting digital housing profiling and field data collection through web and mobile workflows.
- Built an offline-first Flutter survey application with structured housing forms, household-member records, and SQLite local storage for use during limited connectivity.
- Implemented PHP REST API synchronization between mobile records and a centralized MariaDB database, enabling survey and household data to sync when connectivity becomes available.
- Developed responsive web workflows for survey validation, records management, and synchronized housing-data review.

**Veldra - Smart Document Verification Platform** | Full Stack & AI Developer — 2026

- Developed a case-centric document verification platform using Next.js, TypeScript, Supabase, and PostgreSQL for reviewing student visa application documents and discrepancies.
- Implemented OCR and text-extraction workflows for uploaded documents, preparing extracted content for structured analysis and comparison.
- Built chunking, embeddings, pgvector semantic retrieval, and RAG workflows to support document-grounded AI analysis across large document sets.
- Integrated LLM-assisted cross-document comparison and human-review workflows to surface inconsistent or missing information for verification.

**StudFlow - AI-Powered Study Platform** | Full Stack & AI Developer — 2026

- Built a responsive full-stack learning platform using Next.js, React, TypeScript, Tailwind CSS, and Supabase for document-based study workflows.
- Implemented AI-powered generation of summaries, flashcards, quizzes, and notes from uploaded learning materials.
- Integrated RAG and semantic retrieval for document-grounded conversations and source-backed study assistance.
- Developed end-to-end AI workflows that connect uploaded documents, retrieval, generated learning content, and user-facing study experiences.

## EDUCATION

**University of Mindanao - Digos College** — Jun 2026

Bachelor of Science in Information Technology. Focused on full-stack web development, database systems, API integration, AI-powered applications, and practical software development workflows.
